

Ilya Bozhko

Civil Engineer · Structural Design, Technical Office & Site Supervision · Revit / AutoCAD

+7 926 880-4566 | bozk07@mail.ru

Currently Moscow Region, Russia · Relocating to Cyprus, available immediately

Russian citizen · Work permit sponsorship required

4+ years: design office + technical office + site

Revit & AutoCAD

MGSU - MSc & BSc

Architectural, RC & site-plan sections

Cost checking & procurement

127-house settlement: types + masterplan

Licence A, B + own car

Available immediately

PROFILE

Civil engineer who has worked every seat on a building project: **drafting technician, technical office engineer, design engineer, and lead engineer running a technical department**. Four years of delivery across low-rise residential development, industrial and production buildings, multi-occupancy residential and refurbishment. MSc and BSc from **Moscow State University of Civil Engineering (MGSU)**, Russia's leading civil engineering school, in Industrial and Civil Structural Engineering.

I design and I supervise what I design. I have produced construction drawing packages for a developer's own housing programme, planned a 127-plot residential settlement together with the standard house range that filled it, then stood on site enforcing those drawings against as-built reality. I am relocating to Cyprus and targeting a **Site Engineer, Design Engineer or Technical Office Engineer** role with a developer or contractor in Limassol, Paphos, Larnaca or Nicosia, and am ready to move onto **Eurocodes EN 1992 / 1993 / 1998 with the Cyprus National Annex**.

WHY I FIT A CYPRUS DEVELOPER

- **I have already designed your typology, at scale.** A 127-plot settlement masterplan plus the standard house range that filled it: three types from 95 to 200 m², aerated block, configurable terraces, carports and garages. That is a developer product line for villas and low-rise complexes, which is most of what Cyprus builds and sells.
- **Revit, and I build the model myself.** Not editing someone else's file: I model from scratch to the structural system actually used on site. Most mid-size contractors on the island still run flat AutoCAD.
- **Design and site in one hire.** You do not need one person to draw it and another to defend it. I catch design-versus-site conflicts the day they appear, not six weeks later by email.
- **Documentation is not my bottleneck.** Method statements, inspection records, as-builts, close-out packs. On most sites this is what delays handover; it does not delay mine.
- **I cost projects at investment stage and I run the procurement.** Investment-stage proposals for new production capacity: concept, scope and cost basis for the build decision. Plus checking cost estimates and quantity take-offs, writing technical specifications for procurement packages, and sourcing and screening contractors and suppliers under a regulated tender procedure. That is what a developer needs before the money is spent.

PROFESSIONAL EXPERIENCE

Lead Engineer, Construction & Refurbishment

NIID - Scientific Research Institute of Engines · R&D institute with its own production facilities · Moscow, Russia

March 2026 - August 2026

- Owned the technical department across an industrial site programme: two 1,000 m² production buildings and a 2,000 m² manufacturing hall, delivered concurrently.
- Developed **investment-stage design proposals for 1,500 m² of new production capacity**: concept, scope and cost basis for the client's build decision.
- Negotiated and signed off work execution plans with main contractors and subcontractors: method statements, sequencing, temporary works.
- Reviewed structural and architectural drawings and specifications, issued clarifications and killed design conflicts before they reached the site.
- Checked **cost estimates and quantity take-offs**, wrote technical specifications for procurement packages, and sourced and screened contractors and suppliers under a regulated tender procedure.
- Built and closed out full handover documentation packages for completed works.

Technical Office Engineer

Fortress LLC · Solnechnogorsk, Moscow Region, Russia

October 2025 - January 2026 (fixed-term project engagement)

- Ran design documentation and inspection records for concealed works on a **200-bed residential accommodation building**.
- Wrote work method statements and construction execution plans for the delivery team.
- Carried out designer's site supervision through execution, issuing design clarifications on the spot.

Military Service, Russian Armed Forces

June 2024 - June 2025 · Mandatory national service, completed in full

Design Engineer (Structural & Architectural)

YUKO Construction Company · Moscow Region, Russia

June 2023 - May 2024 · Residential developer: construction, real estate, property management, in-house design office

- Authored the **masterplan for a 127-plot residential settlement**: house siting, road network, utility corridors and construction phasing. Plots of 600 to 800 m².
- Issued **full architectural packages for six individual houses**, single and two-storey: floor plans with schedules, all elevations, roof plan, pile field and pile caps, masonry setting-out plans, electrical and drainage layouts, 3D views.
- Designed the developer's **standard house range** rolled out across all 127 houses: three types (single-storey 95 m² and 110 m², two-storey 200 m²) with configurable terraces, carports and garages, in aerated concrete block.
- Prepared work execution plans for the construction stage.
- Held designer's site supervision on my own drawings, resolving design-versus-as-built discrepancies in real time.

Technical Office Technician

Megapolisy · Practice operating both as a design office and as a contractor · Moscow, Russia

February 2022 - May 2023 · joined earlier as a drafting technician alongside BSc studies

- Contributed to the **Architectural Solutions volume at detailed-design stage** for a production building - the package that goes through state design review: general data and technical indicators, plans, sections, colour elevations with finish schedule and colour scheme.
- Developed **design sections** for a warehouse, cold-store hangars and an extension to an operating electrical workshop: architectural, reinforced concrete structures and site organisation.
- Produced complete **site planning packages**: location plan, site organisation plan, setting-out plan, ground levels and landscaping.
- Designs I contributed to were submitted through and cleared state design review.
- Produced method statements and compiled close-out documentation.
- Started in the same practice as a drafting technician during my BSc: drawing production and revision control on live projects, which is where the design-plus-site perspective began.

SELECTED PROJECT EXPERIENCE

Housing	Standard range of three types (95, 110 and 200 m ²) across 127 houses, plus six individual architectural packages, single and two-storey.
Industrial & production	Two 1,000 m ² production buildings and a 2,000 m ² manufacturing hall, plus investment-stage proposals for 1,500 m ² of new capacity.
Production building	Architectural volume at detailed-design stage: plans, sections, colour elevations, finish schedule. Package prepared for state design review.
Residential, warehouse, workshop	200-bed residential building; warehouse, hangars and a workshop extension.

EDUCATION

MSc, Civil Engineering (Structural Design) · 2024

Russian State Agrarian University - Moscow Timiryazev Academy (RGAU-MSKhA), Moscow

BSc, Industrial and Civil Engineering (Structural Engineering) · 2022

Moscow State University of Civil Engineering (NRU MGSU), Moscow

Russia's leading specialist university in civil and structural engineering. Summer site placements during the BSc, including construction of a 21-storey cast-in-situ reinforced concrete building.

Cyprus degree recognition: application to KYSATS (Cyprus Council for the Recognition of Higher Education Qualifications) planned. ETEK registration to follow as eligibility allows; I am applying for roles where design responsibility sits with your registered engineer.

TECHNICAL SKILLS

BIM / CAD	Revit - I build models from scratch to the structural system actually used on site. AutoCAD, ArchiCAD (basic), MS Office, MS Project
Design	Architectural and structural packages at both detailed-design and construction stage, low-rise residential, settlement masterplanning, site planning, pile fields and caps, masonry setting-out, facade colour schemes, specifications
Technical office	Method statements, inspection records for concealed works, as-built surveys, close-out and handover packs
Cost & procurement	Checking cost estimates and quantity take-offs, technical specifications for procurement, contractor and supplier sourcing, regulated tender procedure
Site	Designer's site supervision, contractor coordination, sequencing, design-versus-site conflict resolution
Codes	Russian SP / SNiP (working level). Ready to move onto Eurocodes EN 1992 / 1993 / 1998 with the Cyprus National Annex

LANGUAGES

Russian	Native
English	Basic, actively studying

Relocation: immediate, no constraints. · **Sport:** ice hockey, Olympic Reserve school graduate. · **Age** 25, military service completed. References on request.
